

Web Font Instructions

Please see attached a zip file with the web fonts in **.TTF**, **.EOT**, **.WOFF**, **.WOFF2** & **.SVG** formats. These are only to be used online with @font-face and not installed locally.

There is also a file named `htaccess.txt` which has a line named `'your-domain\.com'` in it — this needs to be changed to the domain you are serving the fonts from. It then needs to be renamed to `.htaccess` and placed inside of the folder where the fonts are stored on the relevant web server (e.g. `/fonts`).

We're happy to provide technical assistance with this if needed!
